PERSONAL SINGER WEBSITE MODEL

Premium Customer Website • Complete Development Blueprint

A modern official website for a renowned singer

Music • Videos • Photo Gallery • Biography • Events • Booking

Prepared as a developer-ready model for the customer-facing website. The artist’s real name, brand identity, photos, music, videos, social links and contact details will be supplied by the owner.

PREMIUM COLOUR PALETTE	HEX
Midnight Navy — primary background	#151B2B
Champagne Gold — highlights and accents	#C7A45A
Warm Ivory — light sections	#FBF7EF
Deep Burgundy — primary action accents	#6F1D35

1. Project Vision

Build a premium official website for one singer—not a multi-artist marketplace. The website should strengthen the singer's personal brand, present their work beautifully, help fans discover music and performances, and let event organisers contact the management team for bookings.

Primary goals

• Create a memorable first impression with a cinematic hero section and professional artist photography.

• Show music, bhajans/songs, albums, official videos, live performances and a curated photo gallery.

• Tell the singer's story through biography, milestones, awards, achievements and career journey.

• Show upcoming events and past performance highlights.

• Provide a clear booking and management enquiry flow.

• Allow the owner/admin to add, edit, publish, unpublish, reorder and delete website content without changing code.

Important: use only approved, licensed or owner-provided images, audio, video and press material. Do not publish private contact information or unverified awards/reviews.

2. Header Navigation — Recommended 7 Tabs

Tab	Purpose	What it contains
Home	Main landing page	Hero, featured music/video, highlights, upcoming events, booking CTA.
About	Artist introduction	Biography, musical journey, style, milestones, awards and press kit.
Music	Listen to tracks	Songs, albums, bhajans, playlists, track details and audio player.
Videos	Watch performances	Official videos, live shows, music videos, interviews and shorts.
Gallery	Photo collection	Concerts, studio, backstage, events, portraits and press photos.
Events	Performance schedule	Upcoming shows, event details, past events and event enquiry.
Contact / Booking	Enquiry and booking	Event enquiry form, management contact, social links and official contact details.

Header actions (not extra tabs):

• Artist logo/name at the left; premium sticky header that becomes compact on scroll.

• Primary gold button: "Book for an Event" or "Contact Management".

• Optional language switch: English | □□□□□. Add only if translations will be maintained.

• Mobile menu opens as a clean drawer; keep the booking action visible and easy to reach.

3. Homepage — Section-by-Section Model

Order	Section	Recommended content
1	Cinematic Hero	Large approved artist portrait or muted background video; artist name; short positioning line; buttons “Explore Music” and “Book for an Event”.
2	Featured Release	Latest song/album cover, title, release date, short description, Listen Now button.
3	Featured Video	One major official/live performance video with thumbnail, title and Watch Video action.
4	About the Singer	Short biography, musical style, years active if verified, link to full About page.
5	Popular Music	3–6 tracks/albums with cover art and playable audio controls.
6	Performance Highlights	Selected concert photos, live stage moments and video highlights.
7	Upcoming Events	Date, event name, venue/city, ticket or enquiry link; hide section if there are no events.
8	Achievements & Press	Verified awards, milestones, press features and notable collaborations.
9	Booking CTA	“Invite [Artist Name] to Your Event” with a short enquiry form or booking page link.
10	Social & Footer	Official YouTube, Instagram, Facebook, Spotify/streaming links, contact and legal links.

4. Page Specifications

HOME

• Hero should use a high-resolution artist portrait or a carefully edited performance video with a dark overlay for readable text.

• Display only a few curated highlights; do not overload the homepage with every song or photo.

• Use subtle animation, smooth scroll, elegant gold dividers and large, readable typography.

ABOUT

• Full biography, early journey, musical influences, career milestones, awards and collaborations.

• Optional timeline, press quotes and downloadable press kit (approved PDF/images).

• All facts, dates and awards must be supplied or approved by the artist/management.

MUSIC

• Filter music by Songs, Bhajans, Albums, Devotional, Live and Latest Releases if relevant.

• Track cards: cover image, title, album, duration, release date, play/pause and progress bar.

• Optional playlists and external streaming links. Audio files should be hosted or embedded with permission.

• Player should continue appropriately while navigating where technically feasible; show clear loading and error states.

VIDEOS

• Categories: Official Music Videos, Live Performances, Bhajans, Interviews, Behind the Scenes and Shorts.

• Video thumbnail, title, category, duration, date and video source.

• Support YouTube/Vimeo embeds and approved uploaded video files, depending on storage and bandwidth budget.

• Lazy-load video players and load only when a user opens a video to keep the site fast.

GALLERY

• Categories: Stage/Concerts, Studio, Backstage, Devotional Events, Portraits and Press.

• Responsive image grid; click to open a lightbox with next/previous controls and captions.

• Support alt text, captions, image ordering and mobile-friendly compression.

EVENTS

• Upcoming event cards: date, title, venue/city, event description and official ticket/registration link if available.

• Past events archive with selected photos/video highlights.

• Do not display private event details unless the owner has approved public listing.

CONTACT / BOOKING

• Form fields: name, mobile, email (optional), event type, date, city/venue, expected audience, budget range and message.

• Show clear success/error messages, spam protection, privacy notice and consent where needed.

• Enquiry notification to the management email/CRM; confirmation to the customer if configured.

• Booking enquiry is not a confirmed booking. Management must confirm availability, fee, travel, technical needs and terms.

5. Premium UI / Visual Design System

Token	Hex	Usage
Midnight Navy	#151B2B	Hero overlay, dark sections, footer, premium base.
Champagne Gold	#C7A45A	Buttons, borders, icons, selected states and fine dividers.
Warm Ivory	#FBF7EF	Light content sections, page backgrounds and cards.
Deep Burgundy	#6F1D35	Primary action accents, important highlights.
Charcoal	#222633	Body text on light backgrounds.
Muted Grey	#5F6675	Secondary text, metadata and captions.

Visual direction

• Use a premium editorial layout: generous whitespace, large portrait photography, strong typography and consistent spacing.

• Use gold sparingly. Avoid bright gradients, too many colours, excessive glow effects or crowded cards.

• Suggested type pairing: elegant display serif for headings + clean sans-serif for body and controls; confirm full Hindi font support if bilingual.

• Animations should be subtle and respect reduced-motion settings. Buttons and links need visible keyboard focus.

6. Admin-Managed Content — Mandatory Requirement

Every customer-facing content area should be connected to the admin-managed database/CMS. The owner should not need a developer to change routine content.

Content type	Admin actions	Customer website result
Artist profile / About	Create, edit, save draft, publish, unpublish, reorder, delete (with confirmation).	About page and homepage bio preview update from published content.
Photos / Gallery	Upload, replace, caption, alt text, categorize, reorder, publish/unpublish, delete.	Gallery and featured homepage photos update.
Videos	Add YouTube/Vimeo URL or upload approved file; set thumbnail, title, category, caption, publish status; edit/delete.	Video listings and featured video update.
Music / Audio	Upload licensed audio or add streaming URL; set cover art, title, album, duration, category and publish status.	Music library and players update.
Albums / Releases	Create/edit release, cover, release date, track list and external links.	Music page and featured release update.
Events	Add/edit date, venue, city, description, ticket/enquiry link; mark past/cancelled; delete.	Upcoming and past events update automatically.
Awards / Press	Add/edit verified award, article link, publication logo and date; publish/unpublish.	Achievements and press sections update.
Booking enquiries	View, assign, update status, add internal notes, export if needed, archive.	Customer sees only their own enquiry status if a customer portal is implemented.
Site settings	Edit logo, artist name, tagline, social links, contact email/phone, SEO metadata and footer.	Global website content updates consistently.

Delete and safety behaviour

• Ask for confirmation before deleting content; explain if it will disappear from the public website.

• Prefer archive/soft-delete for important records so accidental deletion can be recovered by authorised admins.

• When replacing an image/video/audio file, update the linked record safely and remove unused storage objects only after confirming no other page uses them.

• Only authorised admin accounts can publish or delete. Use secure login, role-based permissions, audit logs and protected upload validation.

• Limit file size and file types; scan/validate uploads; use cloud object storage/CDN for media. Never store large media directly in the main database.

7. Booking Enquiry Flow

Step	System behaviour
1. Visitor opens form	Visitor enters event type, date, city/venue, contact details, audience, budget and requirements.

Step	System behaviour
2. Validation	Validate required fields, date, email/mobile format, consent and spam controls.
3. Submit	Save enquiry securely with a unique reference number and timestamp.
4. Notify management	Send notification via configured email/CRM; optional SMS/WhatsApp only after integration and consent.
5. Management response	Management contacts customer, checks availability and confirms fee/terms.
6. Confirmation	Only after explicit management confirmation should the event be labelled confirmed. Add payment only if required.

Recommended initial version: enquiry-based booking, not automatic checkout. A payment gateway can be added later after pricing, cancellation, refund, tax and settlement rules are agreed.

8. Recommended Technical Architecture

Layer	Recommendation	Notes
Frontend	Next.js + TypeScript + Tailwind CSS	Responsive, SEO-friendly pages and reusable UI components.
Content management	Headless CMS or custom admin panel	Choose one source of truth for all page content and media.
Backend	NestJS or Next.js server/API	Use authenticated server-side endpoints; avoid exposing secret keys.
Database	PostgreSQL	Store users/admins, media metadata, songs, albums, events, enquiries and audit logs.
Media storage	S3-compatible object storage + CDN	Store approved images/audio/video files; database stores metadata and storage keys.
External video	YouTube/Vimeo embeds	Use official links where possible to reduce hosting/bandwidth cost.
Email / alerts	Transactional email provider; optional SMS/WhatsApp	Keep notification credentials server-side and log delivery status.
Deployment	Managed hosting + HTTPS + backups	Separate development and production environments.

9. Suggested Database / CMS Content Models

Model	Key fields
SiteSettings	artist_name, logo, tagline, contact details, social links, theme, SEO defaults.
Biography	title, short_bio, full_bio, timeline_items, awards references, published status.
MediaAsset	type, storage_key or external_url, thumbnail, title, caption, alt_text, category, sort_order, published, created_by.
Track	title, album_id, audio_asset_id or streaming_url, cover_asset_id, duration, release_date, category, published.
Album / Release	title, cover_asset_id, release_date, description, track references, streaming links, published.
Event	title, date/time, venue, city, description, ticket_url, status, gallery references, published.
Press / Award	title, publisher/organisation, date, link, logo asset, description, verified_by, published.
BookingEnquiry	reference_id, name, contact, event_type, event_date, venue, audience, budget, message, status, created_at.
AdminUser / AuditLog	role, permissions, action, record_type, record_id, timestamp, result.

10. Non-Functional Requirements

• Responsive layout for mobile, tablet and desktop; test common screen sizes.

• Fast page loading: compress images, generate responsive sizes, lazy-load gallery/video content, and cache public pages.

• SEO: unique page titles, meta descriptions, canonical URLs, Open Graph images, sitemap, robots rules and structured data where accurate.

• Accessibility: readable text, good contrast, keyboard navigation, meaningful image alt text, captions/transcripts where available, visible focus states.

• Security: HTTPS, secure admin sessions, strong passwords/MFA if supported, role-based access, CSRF protection where applicable, rate limiting, upload validation and audit logging.

• Privacy: collect only necessary enquiry details, publish a privacy notice, define retention/deletion rules and restrict admin access to customer enquiries.

• Reliability: automated database backups, media backup policy, error monitoring and tested recovery procedure.

• Copyright: owner must have rights or permission to publish all audio, videos, photographs, logos and embedded content.

11. Acceptance Checklist — Before Launch

Area	Must pass
Header & navigation	All 7 tabs route correctly; mobile menu works; booking CTA is visible.
Home	Hero, featured music/video, biography, events and footer load from admin-managed content.
Music	Tracks play/pause, errors are handled, covers and metadata are correct, mobile controls work.
Videos	Valid embeds/files play, thumbnails display, privacy settings are respected, slow connections are handled.
Gallery	Images resize correctly, lightbox works, captions/alt text appear, no broken images.
Admin CRUD	Create, edit, preview, publish, unpublish, reorder and delete each content type; changes reflect on customer site.
Access control	Unauthorised visitors cannot access admin APIs or upload/delete content.
Booking	Required fields validate, enquiry saves once, reference number is created, management notification works.
Security & recovery	HTTPS, backups, restore test, rate limits, upload validation and audit logs checked.
Quality	No placeholder content, no fake reviews/awards, no broken links, spelling and Hindi/English text reviewed.

12. Development Phases

Phase	Deliverable
Phase 1 — Design	Brand kit, responsive design, homepage, all page templates and reusable components.
Phase 2 — CMS/Admin	Secure admin login, content models, media upload and content lifecycle controls.
Phase 3 — Customer Website	Music, videos, gallery, biography, events, contact and SEO.
Phase 4 — Booking Enquiries	Form validation, database storage, notifications, enquiry statuses and anti-spam.
Phase 5 — QA & Launch	Device/browser testing, accessibility, performance, security review, backups and production deployment.

13. Final Developer Instruction

Build a production-quality, premium personal website for a single established singer. Do not create a multi-artist marketplace. Use a cinematic Midnight Navy + Champagne Gold + Warm Ivory + Deep Burgundy design system. Implement the seven customer navigation tabs: Home, About, Music, Videos, Gallery, Events and Contact/Booking. Every photo, video, track, biography section, event, award, press item and site setting must be managed through a secure admin CMS with create, edit, preview, publish/unpublish, reorder and delete/archive actions. Changes made by an authorised admin must update the customer website without code edits. Use real owner-approved content only, responsive accessible UI, SEO, secure media storage, database-backed content, tested enquiry flow, and documented backups. Provide a working staging deployment and test all admin and customer flows

before launch.

Owner inputs needed before final launch: artist’s public name/stage name, logo, approved biography, profile photos, official music/video links or licensed files, event/booking contact, social links, awards/press details and preferred domain.
